

LYNX SPRING BEANS

WANT TO SECURE UP TO €1000/HA THIS SPRING?

DID YOU
KNOW?

Beans are worth up to €500/ha
DAFM Protein Aid Scheme*

Beans can save up to €500/ha
on Fertiliser*

Never before has there been a more compelling reason to sow beans. Beans have the potential to help farmers secure up to €1000/ha this spring.

- Yield Benefit to the following crop
- Saving on N
- Protein Aid Scheme

Research shows that sowing beans as a break crop can add 1.0t/ha to the following cereal crop.

The ability of beans to fix their own N can save up to €500/ha on fertiliser, and beans are worth up to €500/ha with the addition of the DAFM Protein Aid Scheme.

6 key pieces of information when deciding to grow beans

1. Beans are eligible for up to €500/ha Dept of Agriculture Protein Subsidy in 2023 (automatically applied for when completing your Basic Payment Scheme online)

2. Beans save up to €500/ha as they require no nitrogen to grow and leave nitrogen (30 kg/ha) for the following crop

3. Beans yield best in medium/heavy soils with good soil fertility (index 3 for P & K) and pH above 6.5

4. Drill LYNX @ 40 seeds/m² (210 kg/ha or 13 st/ac) to establish 30 plants/m²

5. Drill beans from Feb to mid-April, soil conditions trump the drilling date

6. Beans break the take-all cycle and add 1.0 t/ha extra yield to the following crop

COUNT BEANS IN SECURING YIELDS in 2023 series

In this podcast, with our guests Ciaran Collins, Teagasc, Luke Thornton, Quinns of Baltiglass, and Darragh Cleary, Kildare farmer, we discuss why farmers should COUNT LYNX BEANS IN, as well as:

- The latest research from Teagasc
- How beans performed on farm this year and what farmers need to know on the agronomy of beans
- How the potential N saving will allow farmers to manage the utilisation of N across their farm
- What the New Protein Payment Subsidy means to farmers
- A perspective on the demand and feed value of beans in animal feed
